

Evening Library Hours Pilot

Teaching brief - fictional source for evidence-checking practice

Mei Lin and James Carter

Urban Learning Methods Lab, 2026

Purpose

A university library extended evening opening hours for four weeks.

The pilot asked whether students used the additional hours and how visitors described them.

Observed results

Evening visits increased from 120 to 180 per week during the pilot.

A voluntary survey of 40 visitors found that 30 said later closing helped them study.

Important scope note

The survey covered visitors who chose to respond. It did not sample all students.

Turn to page 2 for limitations and interpretation.

Results and limitations

Observed:

- Evening visits increased during the four-week pilot.
- 30 of 40 surveyed visitors said later closing helped them study.

Limitations:

- The pilot took place during exam season.
- There was no comparison library or control group.
- Academic grades were not collected or analysed.
- The visitor survey was voluntary and does not represent all students.

Interpretation

The pilot supports the claim that evening use increased during the trial.

It does not establish that longer opening hours caused the increase.

It does not establish that extended hours improved academic performance.

Recommended wording

"Evening visits increased during the four-week pilot; the study did not test grade effects."
